Signature Pad Setup

Anne Kochanski

2 years ago · Updated

Follow

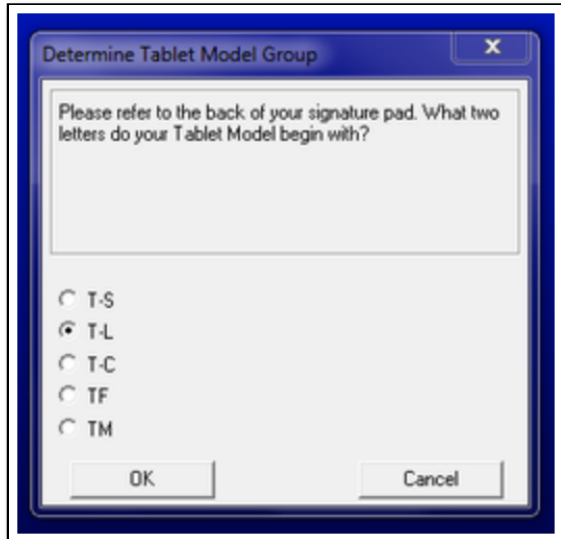

The software by Topaz Systems that we need to install is called SigWeb.

1. <http://www.topazsystems.com/software/sigweb.exe> Download this installation file and do not run it yet. Also do not plug in the signature pad yet.
2. Move the downloaded file into your top level C:\ folder. Your computer may ask you for permission to do so.
3. Close all open browsers.
4. Click the Start menu, type in **cmd**, right click on cmd and run as

Support

eb.exe and press enter. This opens the installer.

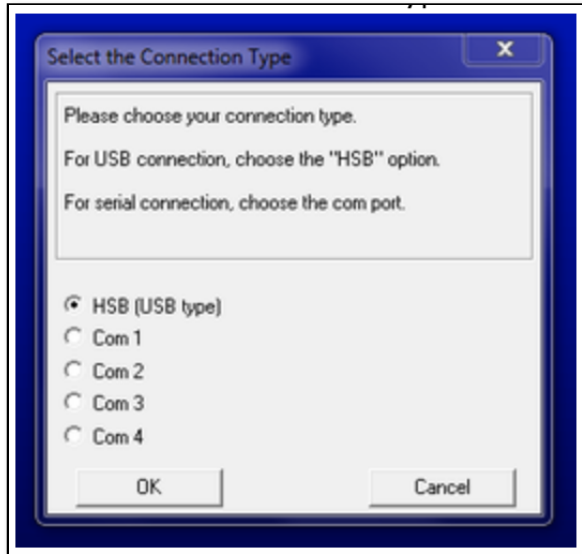

6. Select **T-L** for model.

7. Select **460**.

8. Select **USB** for connection type.

9. This step is optional: To double check that the installation worked, plug in the signature pad, go to a [SigWeb demo page](#), and follow the instructions. When signing on the signature pad, you should see your signature in the browser in real time.

You may be prompted to install Microsoft .NET Framework 3.5 if the computer doesn't have it.

If these steps do not work, see the Topaz Systems page for [SigWeb](#) for more details.
